RESULTS OF SEED TESTS

Made July 1, 1932 to June 30, 1933

—o—

This report contains the results of the inspection for the State Department of Agriculture of three hundred eighty-four official samples collected throughout the State during the period from July 1, 1932 to June 30, 1933. These were analyzed and the results mailed to the retail dealers. In addition to these official samples, twenty-four private samples were analyzed, making a total of four hundred eight samples inspected.

The seed law does not prohibit the sale of poor seed but it does require that all seed be labelled to show its quality. The buyer is therefore protected. The purpose of the seed inspection work is to determine, within reasonable limits, whether a sample of seed is as good as it is guaranted to be.

A certain amount of variation is to be expected in comparing the results of two or more purity analyses. For this reason a "tolerance" or variation is allowed in accordance with the following formula, applied to the guarantee given. The sample is considered as being made up of two parts, the one being the pure seed and the other the balance of the sample. The tolerance in per cent allowed for each part is two-tenths of one per cent plus 20 per cent of the lesser part. For instance, if a sample is guaranteed 99.60% pure seed, it may test as low as 99.32% or as high as 99.88% and would be "satisfactory." In the same way, a sample guaranteed 92.80% may test as low as 91.17% or as high as 94.43% and be "satisfactory." If a sample is found to be better than the highest figure in the tolerance, it is marked "Above" in this bulletin; if lower than the lowest figure, the actual figure is reported.

A wider tolerance for germination than for purity is allowed between the results of the test and the guarantee, as follows:

Guarantee %	*Allowable variation* %
90 or over	6
80 or over but less than 90	7
70 or over but less than 80	8
60 or over but less than 70	9
Less than 60	10

Accordingly, a sample guaranteed 92% germination is "satisfactory" if it tests 86% to 98%. A sample guaranteed 85% may fall as low as 78% or as high as 92%. If a sample tests higher than the per cent of variation allowed it is marked "Above" in this bulletin or, if it tests below the variation allowed, the actual figure is reported.

The summary table on the last page will show the general results of the seed inspection work for the year ending June 30, 1933.

COMPARISON OF SEEDS FOR FOUR YEARS

	No. of Samples	No. Below as to Purity	% Below as to Purity	No. Below as to Germination	% Below as to Germination
1930	375	51	13.6	74	19.7
1931	325	36	9.3	68	17 6
1932	357	23	6.4	46	12.3
1933	384	30	7.8	37	9.6

It will be noted from the above tabulation that the percentage of samples below the guarantee as to germination is less this year than ever before, while the percentage below as to purity is slightly higher than last year but considerably below the average.
